

ORGAN DONATION - NEW START TO LIFE

Hello, my name is John Crabtree. I have lived in North Western Tasmania all my life. I am getting back into the business world again after being ill for the past six years. It was found that I required a new liver due to an inherited faulty gene. One year ago I was blessed with a liver transplant. I am now ready to return to work. My background has been one of servicing the dairy farm industry in quality control and problem solving so dairy farmers were not losing money due to quality issues. My wife Yvonne and I discussed the future and thought that Sanitair® would be a good opportunity. I could see that people with split air conditioners were not aware that they need to be cleaned regularly, as we were once ignorant ourselves. The premium clean saves on power bills and avoids unnecessary early replacement as the unit might not be performing well due to the contamination and only requires a clean. We have had our own split air conditioner cleaned and serviced twice. We were amazed at how much 'black tar' dirt, dust, bacteria etc was removed. The air smelt better and the air conditioner was working remarkably better. Thus saving on electricity and prolonging the life of the unit.

While all enjoy the comforts afforded us by modern air conditioning systems, it is important at the same time to recognise them as a source of potentially harmful micro organisms and take steps to ensure that they are properly operated and maintained. By simply ensuring that the air delivery systems in modern buildings and our homes remain free of biological contamination, you can go a long way towards improving the health and quality of your indoor environments.

Benefits of a Sanitair® Premium Split System Clean and Sanitise;

- Kill and remove harmful mould and bacterial contamination
- Improve indoor air quality
- Improve air flow
- Reduce energy costs by up to 30
- Extend the life of your air conditioner
- 12 month mould free guarantee

Mould spores are one of the most common micro-organisms found lurking in air conditioning systems. Mould is a known trigger of asthma.

Symptoms of exposure to mould can be as simple as a stuffy nose or watery eyes. In some cases, exposure to mould spores can be much more serious. Cleaning air conditioning filters is not enough to remove all of the toxic mould contamination that could be in your air conditioner. The real problems lay in the areas you can't reach; the indoor coil, fan, drain pan and drain line which are all moist environments where mould, fungus and bacteria thrive. To ensure that the air you breathe from your air conditioner is always safe you need the benefits of Sanitair Premium air conditioner cleaning service, we use environmentally friendly, bio degradable and non-toxic products. The potential to save the community money on the unnecessary replacement of air conditioners, reduced sick days and breathing healthy fresh air is our priority. Businesses such as Medical Centres, Child Care Centres, Schools, Restaurants, Gyms, Dental Surgeries, Hotels and Commercial Shops are required to ensure they meet the Australian Standards AS3666 in relation to the cleaning of air conditioners.

Breathe clean healthy air with Sanitair, it's guaranteed. Beat the summer heat, winter cold and save money call me now 1800 130 168 or visit us www.sanitair.com.au
